

Road Topology Correction - Snug Harbor

BEFORE

AFTER

The left map displays the original road centerline topology with errors such as dangles and pseudonodes. The right map shows the corrected and validated topology after resolving invalid geometries and marking legitimate geometries as exceptions. The final dataset represents a clean, connected road network suitable for mapping and analysis. Performed by Rayce Perales on ArcGIS Pro 3.6.4 using NC OneMap NG911 Roads 2026.
